math-old.ucsd.edu/~ynemish/teaching/285

## Today: Irreducible Markov chains. Random walks on graphs

Homework 1 is due on Friday, January 14, 11:59 PM

Classification of states: recurrence and transience Let (Xn) be a Markov chain with state space S. Def 4.1 A state i & S is called recurrent if P: (Xn=i for infinitely many n)=1 A state ies is called transient if P: (Xn=i for infinitely many n)=0 Denote Ti = Ti, = min {n>0: Xn=i} and Ti = P; [Ti < 0] Theorem 4.2 Let i & S. Then (1) it is recurrent  $\Leftrightarrow$   $r_{i=1} \Leftrightarrow \sum_{n=0}^{\infty} p_{n}(i,i) = \infty$ 

(2) i is transient ⇔ r; <1 ⇔ Ž pn (i,i) <∞.

Recurrence and transience of RW Example 4.5 Let (Xn) be a random walk on Z, p(i,j)= /1-p, j=i-1 Fix i \( \mathbb{Z} \) is i recurrent or transient? Use the Z Pn(i,i) criterion. Notice that Pn(i,i)=0 if n is odd Goal: compute Z Pan(i,i) (trivial for p=0 or p=1) Pan (i,i) =

Goal: compute 
$$\sum_{n=0}^{\infty} P_{2n}(i,i)$$
 $P_{2n}(i,i) =$ 

(trivial for  $p=0$  or  $p=1$ )

Case 1:  $p \in (0,1)$ ,  $p \neq \frac{1}{2}$ . Then  $p(1-p) < \frac{1}{4}$ 
 $\sum_{n=0}^{\infty} P_{2n}(i,i) = \sum_{n=0}^{\infty} {2n \choose n} (p(1-p))^n$ 
 $\sum_{n=0}^{\infty} P_{2n}(i,i) = \sum_{n=0}^{\infty} {2n \choose n} (p(1-p))^n$ 

Recurrence and transience of RW

$$\binom{2n}{n} = \frac{(2n)!}{n! \, n!}$$
  $\angle$  use Stierling's approximation  $\binom{2n}{n} = \frac{n!}{n!} = \frac{n!}{n!}$ 

$$\binom{2n}{n}$$
 ~

$$\sum_{n=0}^{\infty} p_n(i,i) =$$

Irreducibility Is it always true that either all states are recurrent or all states are transient? Example 1 transient recurrent Def 4.7 Markov chain is called irreducible if for any i, je S there exists ne N s.t. Prop. 4.8 If (Xn) is irreducible, then either all states are recurrent or all states are transient. Proof Suppose i is transient, je 5, Pro(i,j)>0, pr (j,1)>0 Then Y me M Pnotm+n, (i,i) >  $\sum_{m=0}^{\infty} P_m(j,j) \leq$ 

Graphs Def 5.1 A graph G = (V, E) is a collection of vertices V and relations E on VXV (which we call edges). For x, y \ V we write x ~ y to mean (x, y) \ E. E is assumed to be anti-reflexive (xxx, no loops) and symmetric (if x - y then y - x, indirected graph) Example / /2 V= E= Example V = -3 -2 -1 0 1 2 3 4 E = Valence of a vertex x ∈ V: vx =

Simple random walks of graphs

Def. 5.2 The simple random walk on the graph G=(V,E) is the Markov chain (Xn) with state space V and transition probabilities p(i,j) s.t.

(Xn) is called symmetric and if for all j s.t. i~j.

Example 5.3 RW on Z

 $P(i,j) = \begin{cases} \frac{1}{2} & |j=i+1| \\ \frac{1}{2} & |j=i-1| \\ 0 & otherwise \end{cases}$ -3 -2 -1 0 1 2 3 4  $V = \mathbb{Z}^d = \{ (i_1, \dots, i_d) : i_m \in \mathbb{Z} \}$ Example 5.4. (-2,1) (-1,1) (0,1) (1,1)

RW on Zd i~j iff || i-j || 1 = 1 (-2,0) (-1,0) (0,0) (1,0)  $\Rightarrow v_i = \frac{1}{2d}$  $\|x\|_1 = \sum_{m=1}^{\infty} |x_m|$ (-2,-1) (-1,-1) (0,-1) (1,-1) (2,-1)

SRW on Zd Remark For any dEN, simple random walks on Zd are irreducible => all states are in the same class SSRW on Z, de{1,2,3} 1/2 transient transient transient recurrent recurrent recurrent

Simple symmetric RW on #3 As for d=1, Pn(i,i)=0 if n is odd Goal: determine if Z P2n (iii) is finite or not. Take i=0=(0,0,0) for simplicity. P2n (0,0) = i steps (+1,0,0) isteps (-1,0,0) ; steps (0,+1,0) j steps (0,-1,0) k steps (0,0,+1) k steps (0,0,-1)

$$P_{2n}(\overline{0}_{1}\overline{0}) = \sum_{\substack{i_1j_1k_20\\i_2j_1k_2=n}} \frac{(2n)!}{(i!.j!.k!)^2} \cdot (\frac{1}{6})^2 =$$

$$\int_{2n}^{2n} (0,0) = \lim_{\substack{i,j,k \ge 0 \\ i \neq j \neq k = n}} (i!.j!.k!)^{2}$$
Step 2:

ep 2:  

$$\sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq 0 \\ i+j+k=n}} \binom{n}{i,j,k \geq 0} = \sum_{\substack{i,j,k \geq$$

and thus 
$$\frac{\sum_{i_1j_1k\geq 0} {\binom{n}{i_1j_1k}} \left(\frac{1}{3}\right)^{2n} \leq \frac{1}{(i_1j_1k)} \left(\frac{1}{3}\right)^{2n}$$

Steps 1-3 imply that
$$P_{2n}(\bar{0}_{1}\bar{0}) \leq {2n \choose n} {1 \choose 2} \max_{i,j,k \geq 0}$$

$$P_{2n}(\overline{0},\overline{0}) \leq {2n \choose n} \left(\frac{1}{2}\right)^{2n}$$

$$\left(\begin{array}{c} n \\ \vdots \\ i \\ j \\ k \end{array}\right) =$$

$$\frac{\left(3\,\mathrm{m}\right)!}{\mathrm{m!\,m!\,m!}}\left(\frac{1}{3}\right)^{3}\sim$$

Steps 4-s + (\*) + asymptotics for 
$$\binom{2h}{h} \left(\frac{1}{2}\right)^{2h} \sim \frac{1}{1\pi n}$$
 gives
$$P_{6m}(\overline{0}_{1}\overline{0}) \sim \frac{1}{(2\pi m)^{3/2}} = and$$

and

## Simple symmetric RW on Z3

Step 6:  $P_{6m}(\bar{o}_1\bar{o}) \ge \qquad \forall m \in \mathbb{N}$  $P_{6m}(\bar{o}_1\bar{o}) \ge \qquad \forall m \in \mathbb{N}$ 

Conclusion: 
$$\sum_{n=0}^{\infty} P_{2n}(\bar{o}_{10}) \leq (1+6^{2}+6^{4}) \sum_{m=0}^{\infty} P_{6m}(\bar{o}_{10}) \wedge \infty$$

All states of a SSRW on Z3 are

Simple symmetric random walk on 
$$\mathbb{Z}^2$$
 $\forall x_n = \text{projection of } x_n \text{ on } y = x_n$ 
 $\exists x_n = \text{projection of } x_n \text{ on } y = x_n$ 
 $\exists x_n = \text{projection of } x_n \text{ on } y = x_n$ 
 $\exists x_n = \text{projection of } x_n \text{ on } y = x_n$ 
 $\exists x_n = (i,j) \Leftrightarrow y_n = i,j$ ,  $\exists x_n = j-i$ 
 $\exists x_n = (0,0) \Leftrightarrow y_n = 0, \exists x_n = 0$ 

Let  $(y_n)$  and  $(\exists x_n)$  be two independent  $\exists x_n = 0$ 

Define  $x_n = 0$ 

Then  $(x_n)$  is a  $x_n = 0$ 
 $\Rightarrow x_n = 0$
